

# WHY JAVASCRIPT IS NAMED AFTER JAVA?

Dada Sajad  
@dadacoding

A Long Time Ago, Computer Engineers experimented combining Java programming Language with a interpreting Scripting Language

**JAVA**

**SCRIPTING  
LANGUAGE**

The Couple lived a happy life and then they gave birth to a high level baby named JAVASCRIPT

# ONE BIG HAPPY FAMILY

If a Programmer can't have a life then the  
Programming Languages shouldn't too

**So as per this law the  
Love Story is Bullshit**

So the link of Java in JavaScript  
is the same of car in carpet

**le Nothing**

Brendan Eich developed JavaScript in the name of “Mocha”, a name that was later changed to “LiveScript” and eventually changed to “JavaScript”

the name JavaScript was originated as a marketing deal between Sun corporation which developer Java and the inventor of JavaScript which is Netscape

Dada Sajad  
@dadacoding

That's right. It was all within six months from May till December (1995) that it was Mocha and then LiveScript. And then in early December, Netscape and sun did a license agreement and it became JavaScript. And the idea was to make it a complementary scripting language to go with Java, with the compiled language.

**-Eich**

Dada Sajad  
@dadacoding

So JavaScript was named after Java because that made it sound like the cool lightweight cousin to the hottest programming language of the day
