Slice and splice method of array in

JS

Slice()

- Slice method returns the selected element in an array, as a new array object.

- Slice method does not change the original array

Code

Slice()

```js
const fruits=["Banana","Orange","Lemon","Apple","Mango"]
const output= fruits.slice(0,2)
console.log(output)
```

OUTPUT

```
[ 'Banana', 'Orange' ]
```

Splice()

- The splice method returns the removed items in an array

- The slice method changes the original array in Javascript

Code

splice()

```
index.js  ×
1   const fruits = ["Banana", "Orange", "Apple", "Mango", "Kiwi"];
2   const output=fruits.splice(0, 2);
3   console.log(output)
```
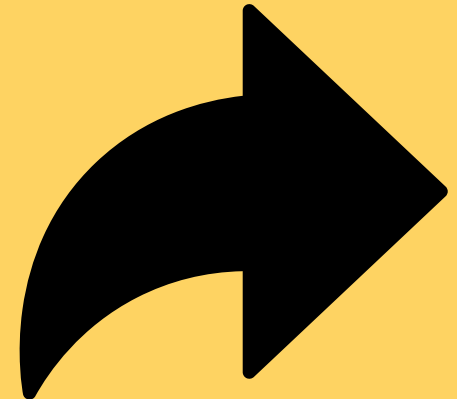

OUTPUT

```
[ 'Banana', 'Orange' ]
```
